

**NTE1907  
 Integrated Circuit  
 Negative 3 Terminal Voltage Regulator,  
 -18V, 100mA**

**Description:**

The NTE1907 is a negative 3-terminal voltage regulator in a TO92 type package suitable for numerous applications requiring up to 100mA. This device features thermal shutdown and current limiting making the NTE1907 remarkably rugged. In most applications, no external components are required for operation.

The NTE1907 is useful for on-card regulation or any other application where a regulated negative voltage at a modest current level is needed. This device offers a substantial advantage over the common resistor/zener diode approach.

**Features:**

- Internal Short-Circuit Current Limiting
- Internal Thermal Overload Protection
- No External Components Required

**Absolute Maximum Ratings:**

Input Voltage, $V_I$ .....	-35V
Internal Power Dissipation (Note 1), $P_D$ .....	Internally Limited
